

Jeffrey De La Cruz — Personal Portfolio Website

Complete Build Documentation & Session Record

Generated 2026-07-19 · Repo: github.com/Jeffreys-World/Official-Personal-Website · Built with Claude Code

1. Project Overview

A single-page developer portfolio supporting Jeffrey's pivot into software engineering and AI product building. The design is structurally inspired by **haoqi.design** — typography-led hero, minimal utilitarian navigation, list-based project rows, and technical "HUD" metadata — rebuilt with original content, copy, and a New York City visual identity.

The site was planned from two briefs (*Jeffrey_Portfolio_Site_Plan.pdf* and the resume PDF), built greenfield in `d:\GitHub\Official Personal Website\`, verified with Lighthouse, and pushed to GitHub. A prior draft (`Personal Website First Draft\`, plain HTML/CSS) was intentionally not reused.

2. Decisions Made (User-Confirmed)

Decision	Choice
Site structure	Single page (no separate case-study pages)
Navigation	Experience / Projects / Contact — smooth-scroll anchors
Stickers	Custom NYC-themed SVGs built in-house (subway token, I♥NY mark, pigeon, water tower)
Typography	Free open-source fonts (Space Grotesk + Space Mono), not the reference site's commercial font
Cyclistic presentation link	In-repo PDF fallback (no Google Slides URL on file)
Theme	Dark mode default with THEME[D/L] toggle; no sound toggle

3. Tech Stack

Layer	Technology	Notes
Framework	Next.js 16.2.10 (App Router, TypeScript)	Fully static output — all routes prerendered
Styling	Tailwind CSS v4	CSS-first config; @custom-variant dark class strategy
Animation	Motion 12 (Framer Motion, motion/react)	Scroll reveals, stagger; respects prefers-reduced-motion
Theming	next-themes 0.4	Dark default, class attribute, no flash-of-wrong-theme
Fonts	Space Grotesk + Space Mono via next/font/google	Self-hosted at build; zero external font requests
Runtime	Node v24.18.0 / npm 11.16.0	Windows 10, PowerShell
Deploy target	Vercel (pending user import)	Auto-deploys on push to main once connected

4. File Structure

```
Official Personal Website/
├─ app/
│   ├─ layout.tsx      Root layout: both fonts, ThemeProvider, metadata/OG,
│   │                  theme-color, skip link, background layer
│   ├─ page.tsx        Server component composing Nav + all sections
│   ├─ globals.css     Tailwind v4 import, dark variant, theme tokens (both
│   │                  modes), grain + drifting-blob background, scroll rules
│   └─ icon.svg        Favicon – subway-token "JD" motif
├─ components/
│   ├─ Nav.tsx         Sticky mono uppercase nav + ThemeToggle
│   ├─ ThemeToggle.tsx THEME[D]/THEME[L] bracket toggle (useSyncExternalStore
│   │                  hydration guard – passes react-hooks lint)
│   ├─ Hud.tsx         Live NYC clock (EST, ticks every second) + coordinates
│   ├─ Reveal.tsx      whileInView wrapper, reduced-motion aware
│   ├─ ExternalLink.tsx Anchor + ↗ icon + sr-only "(opens in new tab)"
│   ├─ ThemeProvider.tsx Client wrapper for next-themes
│   ├─ icons/index.tsx Arrow, GitHub, LinkedIn, Mail, Sun, Moon (inline SVG)
│   ├─ stickers/index.tsx SubwayToken, HeartMark, Pigeon, WaterTower (aria-hidden)
│   └─ sections/       Hero, Statement, Experience, Projects, Contact
├─ lib/
│   ├─ content.ts      ★ SINGLE SOURCE OF TRUTH for all copy – hero, bio,
│   │                  statement, experience[], projects[], contact, nav
│   └─ motion.ts       Shared variants: fadeUp, fadeOnly, stagger, viewport
└─ docs/              This documentation
```

Maintenance rule: to change any text on the site (bio, dates, project descriptions, links), edit `lib/content.ts` only. Components render from this data — no component edits needed for copy changes.

5. Design System

Colors (CSS custom properties in `globals.css`)

Token	Dark (default)	Light	Used for
<code>--background</code>	<code>#0a0a0a</code>	<code>#fafafa</code>	Page background
<code>--foreground</code>	<code>#ededed</code>	<code>#171717</code>	Primary text
<code>--muted</code>	<code>#a1a1aa</code>	<code>#52525b</code>	Secondary text, labels
<code>--subtle</code>	<code>#27272a</code>	<code>#e4e4e7</code>	Borders, dividers
<code>--accent</code>	<code>#fbbf24</code> (amber)	<code>#b45309</code>	Hovers, NOW badge, highlights

Typography

- **Space Grotesk** (variable) — display and body. Hero headline scales `clamp(3rem, 10.5vw, 8.5rem)`, leading 0.95, tracking `-0.03em`. Statement/Contact headings `clamp(2.5rem, 8vw, 6.5rem)`.
- **Space Mono** — all labels, nav, dates, HUD, footer meta: 11px uppercase, wide tracking. This carries the reference site's technical character.

Signature elements (from the haoqi.design reference study)

- **HUD metadata** — live ticking clock `HH:MM:SS` `EST·NYC` + Manhattan coordinates `40.7128°N × 74.0060°W` in the hero; coordinates repeated in the footer copyright line. (Reference equivalent: "`--:-- GMT+8 CN`", "`0001 X 0001 Y`".)
- **Bracket controls** — `THEME[D] / THEME[L]` toggle. (Reference: `THEME[A]`, `SOUND[[]]`; sound intentionally omitted per brief.)
- **Indexed project rows** — mono `01 / 02` index, title up to 5xl, tag · year label, ↗ arrow, whole row is the link.
- **NYC stickers** — four decorative SVGs (subway token, I♥NY-style mark, pigeon, water tower), slight rotation, reduced opacity, `aria-hidden`.
- **Background** — static SVG film grain (`feTurbulence` data-URI) + two blurred radial-gradient blobs drifting on 40s/52s transform-only CSS keyframes. Zero per-frame JavaScript; disabled under reduced motion.

6. Content Record (as shipped)

Hero

Headline: "I build systems that remove friction."

Eyebrow: Software Engineering & AI Automation

Bio: AI-driven automation across customer service, supply chain, accounting, HR, and marketing; previously YMCA of Greater New York and NYC Parks Department.

Statement

"Innovate With Purpose" + subtitle "AI Driven Solutions and Automations"

Experience (verified against resume 2026-07-19)

Period	Role · Organization
Jul 2026 — Present (NOW)	AI-Native Fellow · Pursuit
Mar — Apr 2026	Business Analyst (Volunteer) · Living Stones Foundation
Jan — Mar 2026	Customer Experience Fellow · KindWork
2021 — 2025	Aquatics Supervisor & Swimming Instructor · YMCA of Greater New York (promotion noted in detail line)
2017 — 2022	Lifeguard · NYC Parks & Recreation

Projects

1. **Cyclistic Bike-Share Analysis** (2024, Data Analysis) → github.com/Jeffreys-World/cyclistic-bike-share-analysis
2. **Bellabeat Wellness Data Analysis** (2024, Data Analysis) → github.com/Jeffreys-World/bellabeat-wellness-analysis

7. Quality Assurance Results

Check	Result
Lighthouse — mobile	Performance 96 · Accessibility 100 · Best Practices 100 · SEO 100 (FCP 0.8s, LCP 2.4s, CLS 0, TBT 140ms)
Lighthouse — desktop	100 · 100 · 100 · 100
ESLint	Clean (one react-hooks/set-state-in-effect error found and fixed via useSyncExternalStore pattern)
TypeScript	Clean
Production build	Fully static — /, /_not-found, /icon.svg all prerendered
External links	Both GitHub repos 200; LinkedIn 405 on HEAD (bot-blocking — URL verified from user's own profile)
Accessibility measures	Semantic landmarks, single h1, skip link, focus-visible outlines, reduced-motion at CSS + JS levels, sr-only link annotations, decorative SVGs aria-hidden, contrast verified both themes

Note: Lighthouse scores were measured before the visual restyle (commit 917ec02). The restyle changed styling only — no new assets, scripts, or images — so scores are expected to hold. Re-run against the production URL after Vercel deploy to confirm.

8. Git History (all three repositories)

Official-Personal-Website (main portfolio)

```
917ec02 restyle: align design with haoqi.design reference
8d0e376 Merge GitHub-initialized history
2732a78 docs: replace scaffold README with project overview
f4b58a4 fix: correct experience entries against resume
7297e11 feat: initial portfolio site — Next.js, Tailwind v4, Framer Motion
3c63d2d Initial commit (GitHub auto-generated)
```

cyclistic-bike-share-analysis

```
1bc43f0 docs: fix README formatting and file references
(restored headings/bullets/table, real PDF filenames, in-repo
presentation link, removed placeholder block)
```

bellabeat-wellness-analysis

6748c05 docs: fix Files table to reference actual repo filenames

All three repos pushed and in sync with origin/main as of generation time.

9. Session Chronology

1. **Planning** — Explored existing repo state (found empty target repo, old draft, both capstone repos); confirmed 4 design decisions with user; produced and got approval on the build plan.
2. **Scaffold** — create-next-app in a temp dir (folder name with spaces fails npm naming), moved into place, renamed package, installed motion + next-themes.
3. **Build** — globals.css tokens → layout → content.ts → primitives → Nav → five sections → stickers → favicon.
4. **QA** — lint (1 fix), clean build, Lighthouse mobile + desktop, link checks.
5. **READMEs** — rebuilt broken Cyclistic README, fixed Bellabeat file table; committed and pushed both.
6. **Resume verification** — user provided resume PDF; all five experience entries corrected (every placeholder date was wrong).
7. **GitHub** — user created repo (with auto README); histories merged without force-push; project README written; pushed.
8. **Redesign** — user pointed to haoqi.design; fetched and analyzed the reference; restyled to its technical/editorial spirit (giant type, mono HUD, bracket controls); committed and pushed.
9. **Documentation** — this document.

10. Token Usage Summary (Estimated)

Disclaimer: Claude Code does not expose exact per-session token counts to the model. The figures below are good-faith estimates reconstructed from the session's activity (documents read, tool calls made, code written, subagents run). Treat them as ballpark planning numbers, not billing data. Actual usage is visible in your Anthropic console / Claude Code `/cost` command.

Phase	Main activity	Est. tokens
Planning & exploration	3 PDFs read (brief, resume, agents guide), Explore + Plan subagents, plan file, user Q&A	~55–75k
Scaffold & build	create-next-app, npm installs, 20+ files written (~1,400 lines of code/config)	~50–65k
QA	Lint fix, 3 builds, 2 Lighthouse runs, link checks	~15–25k
README fixes + GitHub setup	2 README rewrites, commits, merge, pushes	~12–18k
Reference redesign	haoqi.design fetch/analysis, 10 files restyled, verify, push	~25–35k
Documentation (this file)	HTML authoring + PDF generation	~10–15k
Session total		~170–230k

Largest cost drivers: the three input PDFs (each page of a PDF costs both image and text tokens) and the parallel subagent runs during planning. Cheapest per value: the build phase itself — writing code is output-token-light relative to reading context.

11. Outstanding Items

- **Vercel deploy** — user action: import Jeffreys-World/Official-Personal-Website at vercel.com/new, click Deploy (zero config). Every push to main auto-deploys afterward.
- **README "Live" link** — replace the "(Vercel deploy pending)" placeholder with the production URL after deploy.
- **Post-deploy Lighthouse** — re-run against the production URL to confirm 90+ holds.
- **Optional** — custom domain (Vercel → Domains tab); Cyclistic Google Slides link if one exists (currently links the in-repo PDF); OG share image if richer link previews are wanted.

12. Quick Reference Commands

```
cd "d:\GitHub\Official Personal Website"
npm run dev      # develop at http://localhost:3000
npm run build    # production build (catches type errors)
npm run lint     # ESLint
npm run start    # serve the production build locally
git push         # after Vercel is connected, this deploys
```
